

International symposium 2007 on challenging tunnel construction

Eurasia-Pacific Uninet science and technology projects

May 2nd to 4th 2007

Location: Vienna

Organizer: Eurasia-Pacific Uninet

This symposium is to continue the discussion between Chinese and Austrian tunnelling experts started at the "First International Expert Symposium on Undersea Tunnel Construction" in December 2005, at Tongji University in Shanghai. The Symposium 2007 is designed to attract owners, designer, researchers, contractors and suppliers.

In Austria as well as in China, many tunnels of all categories and diameters were built in the past and still more tunnels are under construction and will be built in the future. Modern infrastructure often demands underground construction works. Engineering challenges on modern tunnelling construction need permanent exchange of international experiences. In respect of complex tunnel projects in difficult geological ground conditions, the topic of this symposium will be: "Challenging Tunnel Constructions". It is an opportunity to present, discuss or observe progress and state of the art with focus on complex problem solving for tunnels and tunnelling.
